Located inside Eastbrooke Medical Centre

Matrix Neuropsychology can provide comprehensive reports to **paediatric** and **adult** clients to help understand themselves and how their brain functioning impacts their cognitions, behaviours and emotions.

ADHD and ASD

Diagnostic assessments and management strategies for all ages

Academic Difficulties

Diagnostic assessments, strategies, support for exam modifications and other considerations

Trauma, Mood and Pain

Assessments can clarify the impact of these conditions on cognition

Dementia and Decision Making

Diagnostic assessments and evidence for VCAT (Guardianship and Administration)

NDIS Eligibility and Review

Provide evidence of a life-long disability and therapy needs

Ongoing Therapies

Post-diagnostic therapeutic guidance to clients and parents

Epilepsy and Neurological Disorders on Cognition

Assessments target cognitive implications as well as fitness to drive

What We Provide

Matrix Neuropsychology utilises a comprehensive approach to understand the nature of client problems and the impact on daily function. Assessments routinely include detailed interviews, questionnaires and targeted cognitive tasks. We then provide an individualised feedback session and report containing recommendations to improve a client's everyday function.
